

TRUPOCAL[®] DE

deliming agent

Appearance:	white powder
pH value (1 : 10):	approx. 3

Properties:

TRUPOCAL DE is an ammonium salt containing deliming agent, with excellent buffering properties.

TRUPOCAL DE removes chemically and loosely bound lime and transforms capillary-bound lime into soluble matter.

TRUPOCAL DE ensures a rapid and uniform deliming. Its special formulation provides for a compact structure of loose skin parts (for example bellies) and prevents substance from excessive decomposition (good fullness, less pronounced veins).

TRUPOCAL DE contributes to a very fine and clean grain pattern.

Application:

TRUPOCAL DE is added in 1 - 2 rates, undissolved. The product is readily water-soluble and excellently suited for low-float processes (,dry deliming')

Dosage depends upon type and thickness of skin as well as upon the desired degree of deliming. Usually it varies between 2 and 4 %.

The course of deliming is gentle and without sudden decrease in pH-values. A drop of the pH-value below 5 is avoided and so is the risk of dangerous refixation of scud.

Safety and storage:

When handling **TRUPOCAL DE**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

TRUPOCAL DE can be stored for up to 24 months, if kept in a dry place.

The information given in this technical leaflet is offered in good faith and is based upon our knowledge and experience of the products used. The suitability of the products mentioned to obtain specific properties or effects are given without obligation or guarantee and should be fully tested by the end user and adapted to suit prevailing works conditions or other products which may be employed.
