

# TRUPOTAN<sup>®</sup> BIO-03L

modified biopolymer

<b>Basis:</b>	modified biopolymer with low molecular weight
<b>Appearance:</b>	yellowish liquid
<b>Charge:</b>	anionic
<b>pH value (1 : 10):</b>	approx. 7
<b>Light fastness:</b>	excellent
<b>Heat yellowing:</b>	excellent

## Properties:

**TRUPOTAN BIO-03L** is a natural-based biopolymer suitable for the production of any types of leather from small skins e.g. goat and sheep.

**TRUPOTAN BIO-03L** is free of formaldehyde.

**TRUPOTAN BIO-03L** imparts the leather a good fullness combined with a round and light handles.

**TRUPOTAN BIO-03L** has a high dispersing effect which results in brilliant and even dyeing.

**TRUPOTAN BIO-03L** has no negative influence on waterproofing articles.

## Application:

**TRUPOTAN BIO-03L** can be applied undiluted in the neutralisation process and/or retanning process.

The applied quantity normally lies between 8 – 12 %, based on shaved weight.

**Safety and storage:**

When handling **TRUPOTAN BIO-03L**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

The storage temperature of **TRUPOTAN BIO-03L** should be not below 5°C and above 40°C.
