

TRUPOTAN[®] GD

replacement syntan

| | |
|---------------------------|--|
| Basis: | condensation of aryl sulphonic acid and hydroxyl aryl sulphone |
| Appearance: | yellowish powder |
| Charge: | anionic |
| Active matter: | approx. 97 % |
| pH value (1 : 10): | approx. 3.5 |

Properties:

TRUPOTAN GD is a replacement syntan with universal application in the retanning/bleaching of wet blue and for application together with vegetable tannins in low float tanning systems.

TRUPOTAN GD produces a white, mellow and tight grained leather with good fullness. The grain is especially fine and very suitable for milling.

TRUPOTAN GD may be applied in the retannage together with other syntans and resins to improve the penetration and dispersion.

TRUPOTAN GD is excellent for production of pastel and bright dye tones and exhibits improved light and heat fastness resistance in comparison to phenolic based syntans.

Application:

TRUPOTAN GD can be added directly as powder, or dissolved, to the tanning/retanning drum.

When applied in vegetable tanning **TRUPOTAN GD** bleaches the colour of the leather and accelerates the penetration of tannins.

Retannage of wet blue:

For the retannage of wet blue we recommend that 4 - 8 % **TRUPOTAN GD**, based upon shaved weight, be offered. Due to excellent fastness and tanning properties **TRUPOTAN GD** is very suitable for the production of chrome-free upholstery leathers.

Safety and storage:

When handling **TRUPOTAN GD**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

The product should be stored in a dry, cool place.
