

TRUPOTAN[®] GDL

replacement syntan

Basis:	condensation of aryl sulphonic acid and hydroxyl aryl sulphone
Appearance:	brown liquid
Charge:	anionic
Active matter:	approx. 45 %
pH value (1 : 10):	approx. 3.5

Properties:

TRUPOTAN GDL is a replacement syntan with universal application in the retanning/bleaching of wet blue, for example shoe upper, upholstery leather (car & sofa), nubuck and sheepskin garment.

TRUPOTAN GDL produces a white, mellow and tight grained leather with good fullness. The grain is especially fine and very suitable for milling.

TRUPOTAN GDL may be applied in the retannage together with other syntans and resins to improve the penetration and dispersion.

TRUPOTAN GDL is excellent for production of pastel and bright dye tones and exhibits very good light and heat fastness properties.

Application:

TRUPOTAN GDL can be added directly or diluted to the tanning/retanning drum.

When applied in vegetable tanning **TRUPOTAN GDL** bleaches the colour of the leather, accelerates the penetration of tannins and improves the levelness of the tannage.

Retannage of wet blue:

For the retannage of wet blue we recommend that 6 - 12 % **TRUPOTAN GDL**, based upon shaved weight, be offered. Due to excellent fastness and tanning properties **TRUPOTAN GDL** is very suitable for the production of chrome-free upholstery leathers.

Safety and storage:

When handling **TRUPOTAN GDL**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

The product should be stored in a dry, cool place.
