

# TRUPOTAN<sup>®</sup> TFP

filling agent

<b>Basis:</b>	filling agent based on organic and inorganic components
<b>Appearance:</b>	white powder
<b>Active matter:</b>	approx. 95 %
<b>pH value (1 : 10):</b>	approx. 7.0
<b>Light fastness:</b>	good
<b>Heat yellowing:</b>	good

## Properties:

**TRUPOTAN TFP** is a filling agent specifically designed to fill loose structured areas of the skin or hide.

**TRUPOTAN TFP** when used in the production of splits or nubuck leathers either by direct or crusting methods will greatly assist the buffing capacity and help reduce irregularities in the leather.

**TRUPOTAN TFP** disperses readily in water and exhibits excellent penetration and exhaustion properties when utilised correctly.

Poor quality hides which exhibit loose belly areas and a marked tendency to veininess can be clearly upgraded by the use of **TRUPOTAN TFP** thus allowing improved selection and better profitability to be achieved.

**TRUPOTAN TFP** will not adversely affect the intensity or brightness of dyeings produced with anionic dyestuffs.

The use of **TRUPOTAN TFP** in the production of water resistant leather will not negatively influence the hydrophobic characteristics.

## Application:

**TRUPOTAN TFP** can be used in the main retanning process at levels of between 3 and 6 %, based upon shaved weight.

**Safety and storage:**

When handling **TRUPOTAN TFP**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

The product should be stored in a dry, cool place.
