

TRUPON[®] COL

fatliquor for softy and floater type leathers

Basis:	sulphated synthetic raw materials, phospholipids and special softening components
Appearance:	red brown semi viscous oil
Charge:	anionic
Active matter:	approx. 90 %
pH value (1 : 10):	approx. 7
Acid stability:	medium
Salt stability:	medium
Chrome stability:	not recommended in chrome baths
Light fastness:	very good
Heat yellowing:	good

Properties:

TRUPON COL is an anionic fatliquor designed to produce outstanding softness on all types of leather. Leathers fatliquored with **TRUPON COL** exhibit an open fluffy handle coupled with extremely fine grain characteristics.

TRUPON COL is well suited for the production of 'super soft' shoe upper and 'floater' style leathers. When used in the production of garment leathers **TRUPON COL** imparts a cloth-like handle coupled with a smooth creamy grain.

Application:

TRUPON COL should be prepared for use by adding it to a minimum of five times its own volume of water of 50 °C whilst stirring. **TRUPON COL** is designed for use as a main fatliquor. We would not recommend it to be used in chrome retanning baths nor with the addition of raw oil.

Safety and storage:

When handling **TRUPON COL**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

TRUPON COL can be stored for up to one year, if temperatures below 5 °C and above 40 °C can be avoided. On prolonged storage or extreme temperatures **TRUPON COL** may exhibit some settlement which can be rectified by either warming and/or stirring the product thoroughly before use.
