

TRUPONOL[®] FG

fatliquor for vegetable-tanned and retanned leather

Basis:	sulphited oxidised fish oil
Appearance:	red brown oil
Charge:	anionic
Active matter:	approx. 62 %
pH value (1 : 10):	approx. 6.5
Acid stability:	excellent
Salt stability:	excellent
Chrome stability:	excellent
Light fastness:	good
Heat yellowing:	not recommended for white leather

Properties:

TRUPONOL FG is a highly sulphited fatliquor, based on high quality oxidised fish oil.

Leathers fatliquored with **TRUPONOL FG** exhibit excellent softness and fullness together with a pleasant round handle.

Application:

TRUPONOL FG can be added at levels of between 1 - 3 %, based on shaved weight, in the rechroming or neutralisation process where its excellent electrolyte stability will ensure good distribution and softening properties.

On vegetable-tanned and retanned leathers, **TRUPONOL FG** can be utilised as a friction reducing agent, thus protecting the grain surface from scuffing and pebbling.

Safety and storage:

When handling **TRUPONOL FG**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

TRUPONOL FG can be stored for up to one year, if temperatures below 5 °C and above 40 °C can be avoided. On prolonged storage or extremes of temperature **TRUPONOL FG** may exhibit some settlement which can be rectified by either warming and/or stirring the product thoroughly before use.
